

# COVID-19-TESTLANE

1. Hand disinfection

2. Your throat swab is taken by medical professional

3. Dip your swab in a tube containing the test solution

4. Stir your swab for two minutes and proceed in line to the next station

5. Press the tube together and carefully remove the swab before applying two drops of the solution to the test cassette. Proceed in line to the next station with your test cassette and tube.

6. Present your test results:

One line = negative test: dispose of the tube and enter the building

No line = invalid test: repeat test

Two lines = positive test: the medical staff will escort you to a separate area where you will be asked to take an additional PCR swab test
